SUMMARY

ML Engineer with hands-on experience in computer vision, NLP, and end-to-end model deployment. Built production-ready AI systems achieving 85–99% accuracy across real-world projects. Certified by Microsoft (DEPI), AMIT Learning, and DataCamp. Seeking ML/AI roles and freelance opportunities to deliver impactful AI solutions.

WORK EXPERIENCE

AI Engineer Intern – Uneeq Interns (Mar 2026)

- Developed and deployed 5 AI applications spanning computer vision and NLP domains
- Achieved 85–92% model accuracy across classification tasks using CNN and Transformer architectures
- Reduced RMSE by 20% through hyperparameter tuning and feature engineering
- Built real-time inference systems with sub-second latency (≤0.8s) using FastAPI

Data Science & AI internship - AMIT Learning (Feb 2025 - Oct 2025)

- Completed 243+ hour hands-on program covering ML, Deep Learning, Computer Vision, NLP, and MLOps
- Worked with real-world datasets (5K+ samples), achieving model accuracy up to 99%
- Gained practical experience in Docker and model deployment pipelines

Machine Learning Engineer Intern – DEPI (Microsoft Track) (Apr 2024 – Oct 2024)

- Built and evaluated ML/DL models for classification and prediction tasks using Python, TensorFlow, and PyTorch
- Improved model performance by 15–20% via feature engineering and hyperparameter tuning
- Developed end-to-end ML pipelines covering data preprocessing, training, and evaluation
- Applied CNN, NLP, and Transformer architectures in real-world project scenarios
- Gained practical experience in MLOps and model deployment workflows

---

EDUCATION

B.Sc. in Computer and Systems Engineering Zagazig University (2020 – 2025) GPA: 2.9 / 4.0
Grade: Good (Egyptian grading scale)

LANGUAGES

- **Arabic** (Native)
- **English** (Advanced)

PROJECTS

- **ICMS – AI Module (Graduation project)**
  - Built an intelligent issue management system integrating a Gemini-powered chatbot, transformer-based classifier, and ML ensemble text moderation
  - Designed and deployed REST APIs using Flask, containerized with Docker and hosted on Azure
  - Reduced manual issue categorization effort through automated prioritization pipeline
- **ID Card OCR System**
  - Developed a bilingual (Arabic/English) OCR pipeline using PaddleOCR to extract structured data from ID card images.
  - Built modular field-level processing to improve extraction accuracy across names, addresses, and ID numbers.
- **AI Clinic Chatbot**
  - Built a RAG-based medical chatbot using FAISS, Sentence Transformers, and Gemini API.
  - Achieved 87% intent classification accuracy.
  - Reduced ambiguous responses by 40% and improved resolution time by 30%.
- **Car Crash Prediction System**
  - Built a real-time collision prediction system using VGG16 and OpenCV on images and video streams
  - Achieved 85% classification accuracy; improved generalization via transfer learning and data augmentation
  - Deployed a prototype capable of real-time risk detection and alert generation
- **Twitter Sentiment Analysis System**
  - Built a bilingual (Arabic/English) NLP pipeline for scraping, analyzing, and visualizing Twitter sentiment
  - Developed a Flask web app with interactive dashboards and database integration for real-time sentiment tracking

---

SKILLS

- **Programming & Libraries**
  - Python ◦ NumPy ◦ Pandas ◦ Scikit-learn ◦ TensorFlow ◦ PyTorch
- **AI & ML**
  - Machine Learning ◦ Deep Learning ◦ Computer Vision ◦ NLP ◦ CNN
  - Transformers
- **MLOps & Deployment**
  - Docker ◦ Flask ◦ FastAPI ◦ Azure ◦ MLOps ◦ REST APIs
- **Data & Tools**
  - SQL ◦ Google Cloud (AutoML, Vision, NLP, BigQuery) ◦ OpenCV ◦ PaddleOCR
  - FAISS ◦ Kaggle

CERTIFICATIONS

- AI Internship from Uneeq Interns — **March 2026**
- AI & Data Scientist Associate from AMIT Learning — **October 2025**
- Data Scientist Associate from DataCamp — **February 2025**
- Microsoft Machine Learning Engineer from DEPI — **October 2024**
